

Power BI Project Documentation

Financial Performance Dashboard

1. Project Overview

The Sales Performance Dashboard was developed in Microsoft Power BI to provide business stakeholders with a centralized view of sales performance, profitability and Business units performance. The dashboard transforms raw sales data into meaningful visual insights that support informed business decisions.

2. Business Problem

Organizations often store sales data in spreadsheets or multiple systems, making it difficult to:

- Track overall sales performance
- Monitor profit margins
- Compare Business Unit's quarter and Fiscal year wise performance
- Identify top-performing products
- Make timely business decisions

This dashboard addresses these challenges by presenting key metrics in an interactive and easy-to-understand format.

3. Project Objectives

The objectives of this project are to:

- Monitor total sales and revenue
 - Analyze profit and profit margins
 - Compare profit across Business units
 - Identify top-revenue generated quarter
 - Track monthly cost, revenue and profit.
 - Enable users to filter and drill into data for detailed analysis
-

4. Tools Used

- Microsoft Power BI Desktop
- Power Query
- DAX (Data Analysis Expressions)
- Microsoft Excel (Data Source)

5. Dataset

Source:

Microsoft Excel

Example Fields:

- Business Units
- BFTE
- GFTE
- Project Cost
- Project Benefit
- FY
- Quarter

- Profit
-

6. Data Preparation

Data preparation was performed using Power Query.

The following transformations were applied:

- Removed duplicate records
 - Removed blank values
 - Corrected data types
 - Renamed columns
 - Created calculated columns where required
 - Standardized date formats
 - Loaded cleaned data into the Power BI model
-

8. DAX Measures

Several DAX measures were created, including:

- Total Revenue
 - Total Profit
 - Total Bfte
 - Profit Margin %
 - Average Utilization Rate
-

9. Dashboard Features

The dashboard includes:

- KPI Cards
 - Total GFTE
 - Total Profit
 - Average Utilization Rate
 - Profit Margin
 - Clustered Bar Charts
 - Profit, Revenue By Business Units
 - Line Chart
 - Profit By quarter
 - Interactive Slicers
 - FY
 - Business Units
 - Quarter
 - Project Name
 - Drill-through functionality for detailed analysis
 - Tooltips for additional insights
-

10. Business Insights

The dashboard helps stakeholders:

- Identify high-performing Business units
- Detect low-profit quarter

- Monitor monthly financial trend
 - Compare quarter, FY performance
 - Track profitability over time
 - Support data-driven decision-making
-

11. Key Benefits

- Faster reporting
 - Improved visibility into business performance
 - Reduced manual analysis
 - Interactive exploration of data
 - Improved executive decision-making
-

12. Skills Demonstrated

This project demonstrates proficiency in:

- Power BI
 - Data Visualization
 - Power Query
 - Data Cleaning
 - DAX
 - Business Intelligence
 - Dashboard Design
 - Analytical Thinking
-

13. Future Enhancements

Potential improvements include:

- Forecasting using Power BI predictive analytics
 - Row-Level Security (RLS)
 - Incremental Refresh
 - Integration with SQL Server or Azure SQL
 - Automated refresh using Power BI Service
 - Mobile-optimized report layout
 - Data Modelling with pertinent data
-

Conclusion

This Power BI Performance Dashboard transforms raw sales data into actionable insights through interactive visualizations and DAX calculations. It enables users to monitor business performance, identify trends, and make informed decisions quickly and effectively.
